### Justification:

On the basis of existing elerical operations it requires approximately 25 minutes on the average to perform all of the operations for the processing and control of a Top Secret document. Of this time, approximately 15 minutes is clerical time. It is estimated that the use of Addressograph equipment can reduce this clerical time by 10 minutes.

During the Budget Year it is estimated that 5000 documents will be subject to these processing and control operations. The use of Addressograph equipment would therefore make a saving of 833 man hours during the year. This saving in terms of the salary of a CAF 4 clerk amounts to \$1824 or approximately 2/3 man year.

It is estimated that if such machine techniques are not adopted it would be necessary to employ two additional clerks beyond the present Table of Organization, but that one additional person will be sufficient with such equipment in use. The total saving is therefore estimated at the full salary of one CAF-4 Clerk or \$2724 per year.

The annual cost of operation, using Addressograph equipment would be as follows:

Material costs 265.70
Equipment cost 231.86 (amortized over 10 years)
\$ 497.56 per year.

Actual savings per year, \$2724 mimus \$497 equals \$2227 per year.

Some

3

1. Film for microfilming of records - \$3675
Savings from use of microfilm - \$ 12,925 the first year with annual savings of \$1458 thereafter.

To keep these records in their original form under combination locks would be as follows: Cabinets required 75 @ \$205 each - total equirement cost - \$15,375

Space for 75 cabinets 0 10 so ft - total 750 @ \$2.00 sq ft/yr - - \$1500 per year

Total cost - \$16,875 first year with \$1500 per year thereafter

To keen these records in original form in a storage location would cost as follows:

Shelf-sections required for 750 cu ft - 29 sections 0 037.00 - \$1073

Cardboard containers required for 750 cu ft - 609 0 \$335 - - - 213.55

Space for 29 shelf-sections 0 10.5 sq ft - 304.5 sq ft 0 5.75 - 228 per year

Total cost first year - - - - - - - - - - - - - - 228 per year

The cost of storage will exceed the cost of filming after the 10th year of storage. However, no estimate is included for overhead and maintenance of records in storage. The Hoover Commission Task Force estimated this to be approx. Sall per cult per year. Using this as additional cost of storage of records, the cost of storage would overtake the cost of microfilming by the 7th year of storage. For these reasons, it is recognized that great care must be exercised in selecting records for filming so that the more economical means may be made use of. It is estimated that the 750 culfit to be filled will be of permanent falue, or will have value for a minisum of 15 years. It is also believed that these costs of microfilming may be bessened as experience is gained in this field.

08 Supplies and "atorials (continued)

2. Justification (continued)

Using average cost figures obtained in August 1948, which do not reflect recent price rises, it was calculated that the average piece of filing equipment in SIA(including safes, insulated cabinets with combination lacks, and ordinary netal or wood cabinets, and including cabinets of all numbers of drawers) is valued at \$123.15 each. It was calculated on the same basis that the average cabinet will contain 7.05 on ft of records and occury 9.27 sq 0t of office space

3. Frames and pla tes for Addressographing operations - - \$273.60

```
Plates - 7 M 6 $ 5.10 - - $ 35.70

Plates - 5 M 6 2.95 - - 14.75

Frames - 5 M 6 24.54 - - 223.15
```

Justification: See under Addressograph Equipment under 09 Equipment

### 09 Equipment

4

6.46

1. Shelf sections for the storage of 1800 ou ft of records - 70 sections 0 \$37.00 - - - \$2590

Justification: As emplained in justification for eardboard containers, Paragraph 2 under 08 above, the use of shelving and cardboard containers in a storage location will return a saving over storage of records in an average calculater in office space of \$28,897 plus annual savings of \$2706 thereafter. These savings would be nearly twice this amount if the filing equipment released were calculated to be Insulated cabinets with combination locks. There is a difference in unit cost of the "average" cabinet from the Safe cabinet of \$21.00, with a minimum of 180 such units required, or a value of \$14,580.

Considering the amortisation of this equipment over 10 years, the annual cost would be \$185.

09 Equipment (continued)

2. Justification (continued)

On the sents of existing clerical operations it requires approximately 35 minutes on the average to marform all of the operations for the processing and control of a Too Secret document. Of this time, approximately 15 minutes is cherical time. It is estimated that the use of Addressograph equipment can reduce this clerical time by 10 minutes.

During the Budget Year it is estimated that 5000 documents will be subject to these processing and control operations. The use of Addressocraph equipment would therefore make a saving of 833 man hours during the year. This saving in terms of the salary of a CAF 4 clerk a amounts to 1824 or approximately 2/3 man year.

It is estimated that is such machine techniques are not adopted it would be necessary to employ the additional clerks beyond the present Table of Organization, but that one additional person will be sufficient with such equipment in use. The total saving is therefore estimated at the full salary of one CAR-4 Clerk or \$2724 per year.

The annual cost of operation, using Addressograph equipment would be as follows: "aterial costs --- ? 273.61 - 185.00 (amortized over 10 years) 458.61 per year. Equipment cost -

Actual savings per year, \$2724 mimus \$458 equals \$2266 per year.

3. Microfilm embinets -- - \$ \$ \$ \$ \$ \$ 364.29

Justification: Cost per microfilm cabinet, Recordak film file No 640, - \$121.43
Capacity per cabinet - 96 - 100 ft rolls, 16mm film per drawer x 6 drawers - 576 rolls per cabinet
Film to be shored - 750 reels produced by the microfilming operation described in paragraph 1, under 08 Suprises. In addition there is an accumulation of microfilm reels produced by other agencies which must be stored in microfilm cabinets, which will require slightly more than one cabinet per year.
